- Databases: MySQL, PostgreSQL, MongoDB
- Tools & Platforms: GitHub, Postman (API Testing), Docker
- Operating Systems: Linux (Ubuntu), Window and Mac

Language

English

Phyo Myat Min

I am a motivated React Web Developer with hands-on experience in building responsive and user-friendly web applications using React.js. I have a strong understanding of HTML, CSS, and JavaScript, and I enjoy working with component-based architecture to create clean and reusable code. I also have experience integrating RESTful APIs, handling authentication, and working with backend services built using Django REST Framework. I am comfortable collaborating in a remote team environment, communicating clearly, and continuously learning to improve my skills and deliver better user experiences.

Experience

2025, October

Noodle Nest Website

E-Commerce Website (PHP)

Developed a fully functional e-commerce platform using PHP that allows users to browse products, add items to their shopping cart, and easily contact the admin. Designed and implemented an efficient backend system to manage orders and product listings seamlessly. Ensured a responsive and user-friendly interface for an optimal experience across all devices.

2026, February

Mobile app API

Django Rest API (Python)

- This project is a Django REST Framework (DRF) based backend API designed for a mobile application. It provides authentication, shop management, categories, reviews, and comments features.
- Only authenticated users can create shops, reviews, and comments
- Only shop owners can edit or delete their shops
- Public users can view shops, categories, and reviews

2025, December

Robotic Arm Website

React+Vite

This project allows users to sort a collection of colors based on predefined rules or algorithms. It's useful for organizing palettes, building UI themes, or enhancing color processing skills. A simple web application / project for sorting colors efficiently and visually.

2025, November

Hackatom Nuclear (SMR)

React + Vite

This project is a modern web application built using React and Vite.

It is designed to showcase how Small Modular Nuclear Reactor (SMR) technology can support agricultural development in Chin State, Myanmar.

Inside the project, the UI presents how SMR technology can provide a stable and clean energy source to remote, mountainous regions like Chin State where electricity access is still limited.
